

# African Hospital Uses Solar-Powered Container 150ft

## Overview

---

Juba Military Hospital has officially commissioned a new 150 kWp solar PV system integrated with a 217.62 kWh battery bank, marking a significant step towards sustainable energy in South Sudan's healthcare sector. To bridge this gap, we are proud to present our Solar-Powered Hospital—an innovative, self-sufficient healthcare solution that combines robust photovoltaic technology with a fully equipped, container based medical facility. Designed specifically for off-grid communities, this mobile clinic ensures. However, faced with the challenges of lack of electricity and high noise from diesel generators in African hospitals, SCU's energy storage system technology provided an innovative solution, successfully achieving photovoltaic during the day and energy storage at night, and ultimately supplemented. The Juba Military Hospital marked a milestone, the official launch of its new 150 kWp Solar PV system paired with a 217. The solar panel system installed by MSF produces 75 percent of the electricity for the General Hospital of Bossangoa. | Central African Republic 2025 © Amadou Barazé/MSF Access to. These repurposed steel units are revolutionizing medical delivery in regions like sub-Saharan Africa, where infrastructure gaps and funding shortages have long stifled progress. By combining speed, affordability, and adaptability, container hospitals are bridging critical gaps in emergency care.
