

Bentley Solar Power Plant

Overview

Bentley Motors has started work at its carbon neutral 'dream factory' in Crewe to increase the number of on-site solar panels to 36,418. The announcement coincides with the 10th anniversary of the first solar panels at the Pym's Lane site, where all Bentley models are built. The country works to shift away from fossil fuels by instituting corporate mandates and directing the People's Bank of China to provide low-cost funding to lenders that contribute to green projects. The objective is to generate a combined 1,200 gigawatts of wind and solar energy by 2030.
