

British high frequency uninterruptible power supply recommendation

Overview

This section provides an overview of key compliance areas for UPS systems in the UK, including: The BS EN 62040 standard outlines the safety and performance requirements for UPS systems in the UK. Frequency of at least six months is recommended. It is emphasised that this is specialist equipment which should be maintained strictly in accordance with the manufacturer's recommended schedule to carry out the described works. Ensure you have read and understood the manufacturer's recommendations, carried out risk assessment(s) on each. The ETL Scheme covers two categories of products: Static (installed) uninterruptible power supply units or packages, with a power range greater than or equal to 1kVA, that use one or more electronic power converters, switches and energy storage devices (such as batteries) to generate their output. Schneider Electric provides complete protection for your critical operations with advanced uninterruptible power supply systems (UPS) and durable electrical enclosures. For home users, a UPS can protect desktop PCs, gaming consoles, and smart home devices from unexpected power cuts. Understanding these rules helps ensure safety, efficiency, and environmental responsibility while avoiding legal and operational risks. A sudden loss of power can cause damage to the delicate hardware.
