

Can ditches be used for photovoltaic panel construction

Overview

Consider solar development using existing buildings, structures, idle or marginal lands, or water bodies such as irrigation ditches. Establishment and maintenance of perennial vegetation is paramount for ensuring the health and function of both the land and the solar farm. on, of length (L) as the mean daily positi The following Re s Surface D nished short-term establishment - finished rapidly establishing temporary (annual) cover that will not interfere with the long-term vegetation to two years). Certain plants may take considerable permanent the nagement for. Large arrays of ground-mounted, elevated solar or photovoltaic (PV) panels are often installed with vegetated pervious ground around, between, and under them. In this case, impervious surface disconnection may be an effective approach to managing post-construction stormwater runoff shed from the PV. We worked on a "Green Energy" project this week, digging ditches for a large solar farm. In this blog, we share the steps and challenges of this job.

Managing Runoff on Solar Farms

Sites with more shallow soils can improve water quality by widening the space between cells to allow more time

for infiltration [PV SMaRT]. Vegetation itself is another element in improving water quality.
