

Clean electricity cairo

Overview

Egypt's largest source of clean electricity is hydro (6%). 2 tCO₂, were below the global average. The Egyptian government has formally announced that the country will aim to generate 42 per cent of its electricity from clean and renewable sources by 2030, emphasizing solar, wind and green-hydrogen projects as cornerstones of the plan. The announcement was made by Manal Awad, Minister of Local. Egypt is on the road to ensure affordable, reliable, sustainable and modern energy. Reliable, sustainable and modern energy is the driving force of building new cities in Egypt; and it is a major pillar in the green recovery action plan. For Egypt to achieve this, however, it must first address critical internal challenges, such as its dependence on. 11% of Egypt's electricity was generated from low-carbon sources in 2024, well below the global average of 41%.
