

# Cuba Wacang Solar Energy

## Overview

---

Amidst an unprecedented energy crisis, the Cuban government has unveiled an ambitious plan aiming to produce nearly 600 MW of solar photovoltaic energy by the first half of 2025. According to. In an interview, Minister of Energy and Mines Vicente de la O Levy detailed a comprehensive strategy that combines short-term projects with a long-term vision. The economic burden of relying on imported fossil fuels is a primary driver behind Cuba's accelerated push toward renewable energy. 87 MW, located in the central province of Sancti Spíritus, began operations after just over two months of installation. The region, like the rest of the country, has suffered through five years of a deepening crisis that has left the lights off. The plan aims for one thousand megawatts of solar energy by 2025, but without installed batteries, which prevents meeting nighttime demand and limits its effectiveness against persistent blackouts. It aims to connect another 1 GW of utility-scale solar to the national grid.
