

# Dimensions of flexible photovoltaic bracket on water surface

## Overview

---

divided the WSPVs into: 1) photovoltaic system with flexible floats in direct contact with water, 2) solar photovoltaic system on the top of the canal, 3) floating photovoltaic system composed of polyethylene floats that completely cover the water. Scavo et al. It typically uses HDPE material for its floating components. Specifications and dimensions of photovol V support model consists of six spans, each with a span of 2 m. The spans are connected by struts, with the support cables having a height of 4. It needs to have enough buoyancy to keep the solar panels a float while withstanding the weight of the PV modules and other associated equipment the efficiency of solar panels by cooling them.
