

Do you need a lift to install photovoltaic panels

Overview

For small residential installations: A two-person lift or ladder slide is usually the simplest and most cost-effective option. For multi-story homes and/or larger residential projects: A rope and pulley system can make the process safer and easier, with only a little extra equipment. This is the good old-fashioned teamwork approach—one person lifts while the other grabs. As system size increases, this method becomes more difficult. Installing a smaller sized system means less. Carrying solar panels to your rooftop can be tricky, so look into safe options like a ladder lift. A ladder lift can be as simple as a rope and pulley ladder combination, or you can get a motorized model. If your roof is not very high, you may be able to lift the solar panels on your own. RGC's new Platform Hoists are engineered for heavy-duty lifting, offering increased capacity and stability for solar installation teams.

Do you need a lift to install photovoltaic panels

7 Essential Safety Measures for Photovoltaic Roof Installation

When handling PV panels, you'll need to be mindful of their weight and fragility. Always lift panels with a partner, using proper lifting techniques to avoid back strain.

How to Install Solar Panels on Your Roof Safely
