## Overview

---

Solar panels rely on sunlight, not heat, to generate power. Moreover, cooler temperatures often enhance panel efficiency compared to. And you wouldn't be wrong, but the truth is, solar panels actually work really well in the winter months too, even if winter means snow and sleet where you live. In reality, the PV systems still work effectively, sometimes better than during the summer heat. However, contrary to popular belief, cold and snow can actually have a positive effect on performance. Read on to find out why this is the case, how. Cold Weather Actually Boosts Solar Efficiency: Solar panels operate 10-13% more efficiently in winter temperatures of 32°F compared to their rated capacity at 77°F, as electrons move more freely and electrical resistance decreases in cooler conditions. While snow accumulation can temporarily block.
