

# Electricity policy gambia

## Overview

---

The electricity sector roadmap also prioritizes investments in transmission and distribution to reduce power losses from 22% in 2020 to 17% by 2025, lower electricity tariffs from USD/kWh 0.18 by 2025, and achieve a target of 40% of renewable energy by 2030. The process towards universal electrification is anchored on The Gambia's multi-year energy sector roadmap (2021-40) and the Strategic Electricity Sector Roadmap 2021-2040's goals are to transform the electricity sector in order to exploit new sources of reliable and affordable electricity and to achieve the Universal Access target by 2025. Since the adoption of the roadmap in 2017, the electricity sub-sector has undergone major positive changes. Banjul, 10th October 2025: The Gambia has officially launched its National Energy Compact, joining the ambitious Mission 300 (M300) initiative, a joint programme by the World Bank and the African Development Bank that seeks to provide electricity access to an additional 300 million people across.
