

Fengjun 7 generator fault light

Overview

A red light may indicate low battery voltage, battery failure, or alternator malfunction, which can prevent automatic startup or proper operation. If the generator's fuel supply is inadequate or contaminated, it might fail to run properly, and the red light will signal, or a malfunctioning governor. These codes are typically displayed as a combination of letters and numbers and can be easily deciphered by voltage after crank disconnect. This article explains what the green, yellow, red, and blue LED lights mean on Generac Next Generation and Guardian Series air-cooled standby generators. It clarifies the difference between maintenance reminders, non-critical warnings, and alarm codes, helping customers understand why a yellow. When a generator malfunctions or behaves in a way that doesn't make sense, you can use these lights to identify the problem. However, these diagnostic lights are only helpful if you know what they mean.
