

# Future prices of solar modules

## Overview

---

One forecast from Rethink Technology Research predicts module prices will fall from around \$0. It is important to remember that the PV module is just one part of a complete solar energy system. The trajectory of solar photovoltaic (PV) module costs has been remarkable, characterized by decades of significant price declines that have positioned solar as a leading source of new energy. However, recent years have introduced new complexities, including supply chain disruptions and fluctuating. Price Stabilization After Volatility: Solar module prices have stabilized in 2025 with global wholesale prices ranging from \$0. 28/W, ending years of dramatic fluctuations as supply-demand dynamics rebalance and weak suppliers exit the market. Though prices are rising, they remain relatively affordable compared to historical.
