

# Household solar without energy storage

## Overview

---

The short answer is yes: You can absolutely use solar panels without battery storage. In fact, the majority of residential solar installations in the U. are “grid-tied” systems without batteries (although solar + battery systems are becoming more and more common). That means you can still store energy for. Discover how battery storage systems can operate independently without solar panels, including technical feasibility, cost analysis, real-world applications, and benefits for residential and commercial users. This approach allows homeowners to connect a battery system directly to the electric grid, store cheaper electricity during off-peak hours, and use it later when rates are higher or during power outages.

## Household solar without energy storage

---

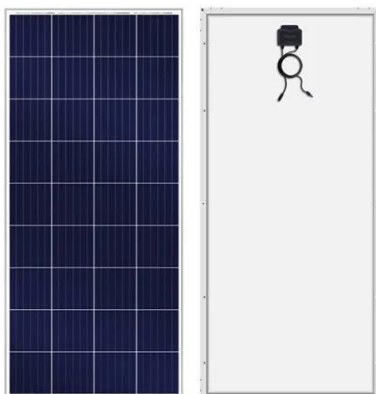

### Home battery storage without solar? It depends...

Standalone battery storage can empower customers to take advantage of cheaper rates, without the inconvenience of having to think about when to use electricity.
