

# How many volts of electricity do photovoltaic panels generate

## Overview

---

Most residential solar panels generate between 16-40 volts DC, with an average of around 30 volts per panel under ideal conditions. This is the maximum rated voltage under direct sunlight if the circuit is open (no current running through the). Solar panel output voltage typically ranges from 5-40 volts for individual panels, with system voltages reaching up to 1500V for large-scale installations. Panels can have 32 to 96 cells, with larger configurations used for commercial electric power generation. The output voltage can be AC or DC, depending on the setup.
