

# How solar cells generate electricity in winter

## Overview

---

It's a common myth that solar panels don't work during winter. They generate electricity even on cloudy days. Do they produce enough energy in colder months?

Solar panels rely on sunlight, not heat, to generate power. In fact, cold climates are actually the optimal environment for solar. Although at first blush it may seem that solar power is ideal for the summer, solar panels actually produce useful power throughout all four seasons — including when they're covered.
