

# How to install the photovoltaic column foot reinforcement plate

## Overview

---

Construction process: This includes steps such as construction alignment, mechanical drilling, reinforcement cage placement, formwork installation, concrete pouring, placement of pre-buried parts, formwork removal and concrete maintenance. The selected solar panel is known as Top-of-Pole Mount (TPM), where it is designed to install quickly and provide a secure mounting structure for PV modules on a single pole. The solar array of a PV system can be mounted on rooftops, generally with a few inches gap and parallel to the surface of the roof. If the rooftop is horizontal, the array is mounted with each panel aligned at an angle. Introduce the crucial role of column foundations in providing a stable and long-lasting base for solar panels.
