

How to sell electricity generated by solar energy at home

Overview

Solar net metering is a smart, rewarding way to get the most out of your solar panel system. It works by sending extra electricity your panels produce back to the power grid, sometimes even letting you sell solar energy back to the grid. In return, you earn credits that can lower. Self-consumption beats exports - Maximizing the solar electricity you use directly in your home typically provides better financial returns than exporting excess to the grid, especially with time-of-use rates and battery storage becoming more common in 2025. It also covers energy compensation schemes. In return, you earn credits that can lower your utility.

How to sell electricity generated by solar energy at home

Selling Electricity With Solar Panels: How It Works

When homes or companies make more electricity than they need, they can sell that energy to the grid in a few different ways. Here are the methods they can use and why one might ...
