

How to use photovoltaic panels in parallel

Overview

How to connect solar panels together in parallel: Join the positive (+) cables of all the panels into a single one, then do the same with all the negative (-) cables. For this, you will need branch connectors or a combiner box. This setup is common in 12V or 24V systems where you want to safely charge batteries or run low-voltage inverters. In this guide, we'll walk you through how. Connecting more than one solar panel in series, in parallel or in a mixed-mode is an effective and easy way not only to build a cost-effective solar panel system but also helps us add more solar panels in the future to meet our increasing daily needs for electricity. The wiring configuration you choose directly affects your system's voltage, current, and overall performance, which determines how much solar energy you harvest.
