

# Hydro Solar Power Company

## Overview

---

Our North American portfolio contains 2,200 MW of utility-scale wind, solar, and battery storage facilities with operations in 15 states and Ontario, Canada. We have a strong commitment to the communities that host our facilities. We work to deliver innovative renewable power solutions to our customers, helping them to meet their renewable energy goals. The facilities produce enough electricity to. Developed in anticipation of New York state's transition from fossil fuel to clean energy, the fully buried Champlain Hudson Power Express® transmission line is ready to power New Yorkers into the future with clean, renewable hydropower. And just in time, too, as the state's new Climate Leadership. Power generation is at the heart of NYPA's mission—and the core of our business. Thanks largely to NYPA's three large-scale hydroelectric plants, New York State is able to produce a substantial portion of statewide power needs. It specializes in renewable energy production and electricity distribution, primarily serving households and businesses in the Helgeland region.

## Hydro Solar Power Company
