

# Indoor solar panels in winter

## Overview

---

Yes, solar panels work in winter and snow. Solar power is energy generated from sunlight and converted into electricity using solar panels, also known as photovoltaic (PV) modules. These panels are made up of individual solar cells, typically composed of silicon, that transform sunlight into usable energy. Here's how the process works: . And you wouldn't be wrong, but the truth is, solar panels actually work really well in the winter months too, even if winter means snow and sleet where you live. This article breaks down what really happens to solar performance in winter, what's normal, what's not, and how to think about your system with confidence instead of guesswork. Cool temperatures can improve efficiency. Photovoltaic solar energy doesn't depend on heat but on light.
