

Introduction to Swiss Energy Storage Products

Overview

SwissSTES aims to reduce Switzerland's dependency on fossil fuels by pioneering seasonal thermal energy storage (STES) to become a net-zero carbon society. An interdisciplinary consortium develops and assesses novel STES technologies and proposes a systemic STES action plan. Energy storage is rapidly becoming more and more relevant due to the increasing renewable energy fraction in the grid, the rise of photovoltaics and the increase in electric cars. It was created as part of an BFE. Since the Alps cover almost two-thirds of Switzerland's landmass and provide numerous large mountain lakes and artificial reservoirs that are suitable for hydro power, the country's electricity sector primarily depends on hydroelectricity. Smaller systems are integrated into the distribution grids. In recent years there has been an
