

# Is it good to install a water tank in front of the photovoltaic panel

## Overview

---

But here's the kicker: photovoltaic panel auxiliary water tank installation could be the upgrade that makes your solar setup work smarter, not harder. Think of it like adding a turbocharger to your electric vehicle - same basic concept, but suddenly you're getting way more bang. as the title says, i'm trying to heat water for domestic use via PV. From my research so far, the most popular suggestion seems to be solar thermal. Tank's 200 liters, and my hot water energy demand is roughly 8 kWh/day, so a 700-1000 watt system would suffice. Solar water heaters directly heat water and store it in insulated tank, water flows through panel by gravity and heat (basically hot water moves towards top than cold). These systems are pretty Solar hot water systems are typically low maintenance, but it is important to follow your installer"s. Solar water tanks offer a compassionate solution, designed to capture and store heat from sunlight, ultimately providing an efficient and sustainable way to heat water in your home.
