

Is neptune the coldest planet on average

Is neptune the coldest planet on average

In Depth , Our Solar System - NASA Solar System Exploration

Our solar system consists of our star, the Sun, and everything bound to it by gravity - the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune; dwarf planets such as Pluto; ...

Kuiper Belt and Oort Cloud

In March 2004, a team of astronomers announced the discovery of a planet-like transneptunian object orbiting the Sun at an extreme distance, in one of the coldest known regions of our solar system.

Is Neptune Hot or Cold?

Is Neptune hot or cold? The answer is both. And it depends on what part of Neptune you mean when you ask the question. The ...

What Is The Coldest Planet In

Our Solar System , Uranus

Curiously though, Neptune only holds the title for the coldest average temperature, and it is the seventh planet from the Sun, Uranus, that has the record for the lowest temperature.

In Depth , Proteus - NASA Solar System Exploration

This image of Neptune's irregularly-shaped satellite Proteus (1989 N1) taken by Voyager 2 shows a resolution of 8 km (5 miles) per pixel. It was taken at a range of 870,000 km (540,000 miles).

Coldest planet in the Solar System

Although Neptune is 1.62 billion km (1 billion mi) farther from the Sun than Uranus, the inner of these two planets is only marginally warmer. Due to Uranus's mysteriously cool planetary ...

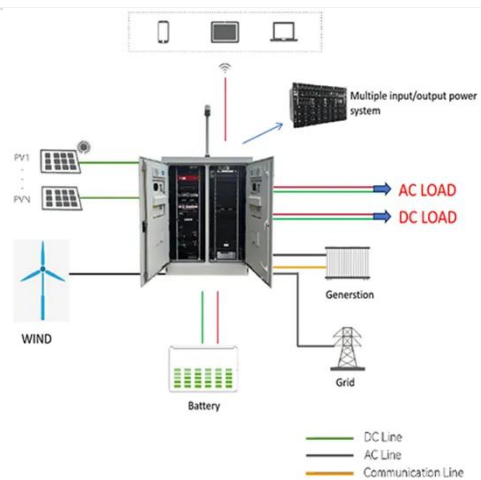

Pluto By the Numbers

Pluto was once our solar system's ninth planet, but has been reclassified as a dwarf planet. It's located in the Kuiper Belt.

Why Is Neptune the Coldest Planet?

Neptune, the outermost major planet in our solar system, holds the distinction of being the coldest measured planet. Its

average temperature in the upper atmosphere hovers around a frigid ...

How Cold Is Neptune? Is It The Coldest Planet?

Why Does Neptune Get So Cold? How Hot Can Neptune get? What Is Neptune Made of? Is Neptune The Coldest Planet? Can Life Be Sustained on Neptune? Neptune is indeed the coldest planet on average in our Solar System, despite the fact that Uranus has the coldest recorded temperature of any planet. The eighth planet also has the coolest moon, which is named Triton. This satellite was analyzed and found to be -391°F when the spacecraft Voyager 2 passed by to gather new information. This is the lo

How Cold Is Neptune? - Important Facts Affecting Temperature

Neptune, being the eighth and farthest planet from the Sun, experiences incredibly cold temperatures. On average, the temperature on Neptune hovers around a bone-chilling -214°C ...

In Depth , Triton - NASA Solar System Exploration

NASA's Voyager 2-the only spacecraft to fly past Neptune and Triton-found surface temperatures of -391 degrees Fahrenheit (-235 degrees Celsius). During its 1989 flyby, Voyager 2 also found Triton ...

What is the Coldest Planet of Our Solar System?

When it comes to ascertaining the average temperature of a planet, scientists rely on temperature variations measured from the ...

Why Is Neptune So Cold? The Chilling Truth Revealed Now! Facts

APPLICATION SCENARIOS

Welcome to Neptune, the mysterious eighth and farthest major planet in our Solar System. Classified as an Ice Giant, this enigmatic celestial body holds the title for one of the ...

In Depth , Kuiper Belt - NASA Solar System Exploration

As Uranus and Neptune drifted farther outward, they passed through the dense disk of small, icy bodies left over after the giant planets formed. Neptune's orbit was the farthest out, and its gravity bent the ...

Planet Compare

NASA's real-time science encyclopedia of deep space exploration. Our scientists and far-ranging robots explore the wild frontiers of our solar system.

The Hottest And Coldest Planets Of Our Solar System

Of all the planets in our solar system, Venus and Mercury are the hottest, with

average temperatures of 464 °C and 167 °C, respectively, while Neptune and Uranus are the ...

In Depth , Titan - NASA Solar System Exploration

Titan is bigger than Earth's moon, and larger than even the planet Mercury. This mammoth moon is the only moon in the solar system with a dense atmosphere, and it's the only world besides Earth that ...
