

Is solar powered air conditioning available

Overview

Direct solar systems power specialized DC air conditioners or hybrid units. There are several approaches to integrating air conditioners with solar. Whether you're looking for a standalone AC unit or a central heating, ventilation, and air conditioning (HVAC) system, choosing one of the best solar-powered AC units can help you reduce your carbon footprint and save money on utility bills. After all, you're most likely to use your AC when the sun is beating down on your home. These panels generate direct current (DC) electricity, which can be used immediately by compatible appliances or converted to alternating current (AC) with an inverter for standard. Solar air conditioners offer a straightforward solution to this dilemma. Seldom doesn't mean never, though.
