

Maximum generator diameter of a power station

Overview

Capacity is the amount of electricity a generator can produce when it's running at full blast. Terminal voltage ratings for power plant generators depend on the size of the generators and their application. 8 kV to suit the size of. IP2X is standard, higher IP ratings require larger machines due to reduced airflow (filtered) or closed-circuit cooling (TEAAC / CACA). 4MW of power behind a turbine with inlet chilling will likely be two very different machines. 11 (i), the annual load curve of the station is shown.
