

Metering management system

Overview

MDMS are essential IT components of advanced meter infrastructures that facilitate the meter-to-cash process by collecting and managing consumption data for utility services such as electricity, water, gas and thermal energy. This data is used for billing, customer service, consumption management (forecast and demand), operations. The Oracle Utilities Meter Data Management system (MDMS) leverages the full potential of utility meter data. In addition, the usage and diagnostic data provides the foundation for the analytics and business processes within the MDMS and SmartData Applications.

Metering management system

What Is a Meter Data Management System (MDMS)?

To make it actionable, utilities and property managers rely on Meter Data Management Systems (MDMS). An MDMS is a specialized software platform designed to collect, store, process, ...

The Top 25 Meter Data Management Systems in 2026

Meter data management systems (MDMS) are integral tools used by utilities and energy companies to collect, store, analyze, and manage data generated by metering devices.
