

Microgrid lead energy storage project

Overview

Battery manufacturer GS Yuasa has teamed up with Siemens and United States-based energy utility Ameren on an innovative managed electric vehicle (EV) charging and microgrid platform. The energy storage system is powered by stationary lead-acid batteries, with solar panels soon-to-be integrated. The Advanced lead battery technology is key part of the “smart grid” technology that is increasingly necessary to supporting the modern economy. As a result, they are far more appealing to a range of buyers, including enterprise and multi-tenant data center owners. By decoupling production and consumption, storage allows consumers to use energy whenever and wherever it is most needed. Coupling battery storage with microgrid installations can. The goal of the DOE Energy Storage Program is to develop advanced energy storage technologies, systems and power conversion systems in collaboration with industry, academia, and government institutions that will increase the reliability, performance, and sustainability of electricity generation and.
