

Nutritious meal after solar stent surgery

Overview

To counteract this common issue, incorporate high-fiber foods, such as cooked fruits, vegetables, and whole grains, into the diet. Eating smaller, more frequent meals can also ease digestion and help manage any residual nausea or temporary loss of appetite. Adopting dietary changes immediately following the procedure is necessary for long-term success and to prevent restenosis, the re-narrowing of the stented artery. These nutritional adjustments manage risk factors like high cholesterol and blood pressure, reducing the likelihood of future cardiac. Here is a quick YouTube video I made describing a diet after stent placement! Following one of these diets after stent placement and coronary angioplasty can be a good choice. These diet patterns are also recommended after heart attack, strokes and stents. Food should feel pureed or liquid in your mouth before swallowing.
