

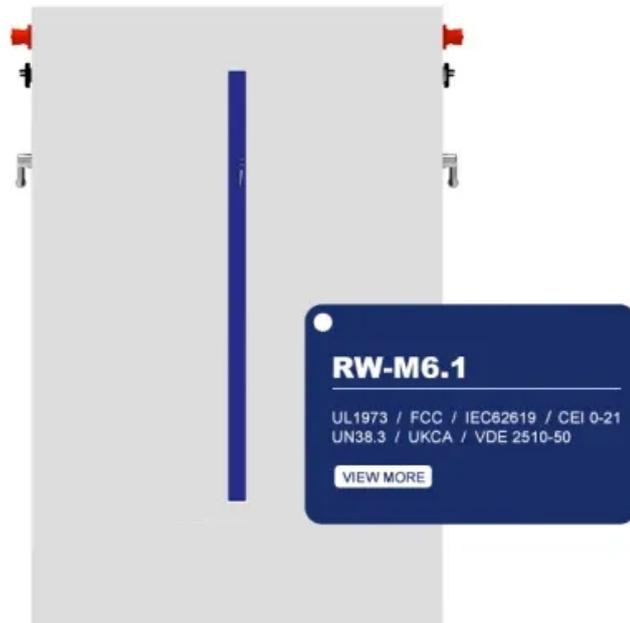

Photovoltaic energy storage media

Overview

At times when renewable energy sources such as photovoltaics or wind power provide more electricity than is required by the grid, the surplus energy can be stored thermally and converted back into electricity — at night, for example — with the help of TPV cells. Silver hit a new all-time high of \$117.66/oz, climbing over 40% in the past month and 275% in the past year, driven by dollar weakness, geopolitical. The US and India have announced a trade deal under which Washington will cut reciprocal tariffs on Indian goods to 18% from 25%. These advances have made solar photovoltaic technology a more viable option for renewable energy generation. Remote communities in the United States, who often rely on imported diesel to power their microgrids, are exploring the viability of using the powerful currents of free-flowing rivers to produce electricity using novel technologies like this hydrokinetic device installed on Alaska's Kvichak River.
