

# Photovoltaic panel built-in fuse model

## Overview

---

To properly fuse a solar system, you must install DC-rated fuses sized at 156% of the array's short-circuit current ( $I_{sc} \times 1.56$ ) in the positive conductors of parallel-connected strings, following NEC Article 690 requirements for overcurrent protection. Understanding proper solar panel fuse selection, sizing, and installation ensures your PV array operates safely while meeting National Electrical Code requirements. A surprising number of installers still use standard AC fuses for solar—risking serious danger without realizing the gaps. To choose the right photovoltaic fuse 1, look at its voltage rating, breaking capacity 2, and make sure it meets IEC 60269-6 3 or UL 2579 4. Always use fuses designed. Properly sizing fuses for photovoltaic (PV) systems is critical for the safe, reliable and long-term operation of this renewable power source. More importantly, electrical codes (NEC 690).
