

Photovoltaic panel spray washing process

Overview

Turn off your solar panel system before cleaning. Spray the panels with a hose to remove loose dirt and debris. Dry your panels with a squeegee or let them dry naturally. While solar panels require minimal upkeep, regular cleaning is essential for optimal performance. Hire a licensed electrician or at night when it is cool. This minimizes thermal stress on photovoltaic cells and protective glasses that could damage the panels. Cold water can microfracture hot panels. Water droplets must also be squeegee'd off before they dry otherwise you'll be left with hard-water spots.

How to Clean Solar Panel and Maximize Solar Energy Production

Project Overview
 Why Do Solar Panels Need to Be Cleaned?
 How Often Do Solar Panels Need to Be Cleaned?
 Before You Begin...
 Step 1: Gather Tools, Materials, and Safety Equipment.
 Step 3: Dislodge Any Dust, Dirt, Or Leaves with A Soft Brush.
 Step 4: Use A Garden Hose to Spray The Panels Clean.
 Step 5: Scrub Any Problem Areas with A Soft Brush and Water.
 Step 7: Use A Squeegee Or Soft Cloth to Thoroughly Dry The Panels Once Clean.
 Step 9: Know When to Call A Professional. Before cleaning solar

panels, homeowners will want to make sure they have the right tools and equipment and feel comfortable handling the task. Next, homeowners will need to power the solar panels off before removing any loose debris or dust with a soft brush. The next step is for the homeowner to spray down the panels with a hose and scrub any problem areas gently with a soft brush and water, or a special cleaning solution for heavily soiled areas. Homeowners will then want to dry the panels with a soft cloth or squeegee before restarting the system. See more
