

Photovoltaic water tank water retaining plate

Overview

Floating photovoltaic systems significantly reduce water evaporation rates in reservoirs and water bodies through multiple mechanisms. The panels create a physical barrier that blocks direct sunlight from reaching the water surface, reducing the solar radiation that typically drives. Water is retained within pockets on the upper sides of the plates while excess water flows through small holes and spills over the edges to be carried off the roof. Without them, standing water can lead to corrosion, algae growth, and. SOLAR DRAIN CLIP-- With compact shape, and portable, take up no space and you can put them anywhere.
