

Power supply for small enterprise dedicated communication base stations

Overview

To address these challenges, a robust power supply scheme has been developed using Pulse Frequency Modulation (PFM), isolated AC-DC converters, and Zero Voltage Switching (ZVS) regulators. When natural disasters cut off power grids, when extreme weather threatens power supply safety, our communication backup power system with intelligent charge/discharge management and military-grade protection becomes the "second lifeline" for base station equipment. In particular, wireless technology plays a major role in modern communication systems. The phrase "communication batteries" is often applied broadly, sometimes. These conditions require innovative power supply solutions that not only minimize size but also enhance efficiency and thermal management while complying with strict electromagnetic interference (EMI) standards.
