

Produce solar panels to generate electricity

Overview

Solar power generates electricity by using either solar thermal systems that convert sunlight into heat to produce steam that drives a generator, or photovoltaic systems, which transform sunlight into electricity through the photovoltaic effect. This energy can be used to generate electricity or be stored in batteries or thermal storage. Below, you can find resources and information on the. At a high level, solar panels are made up of solar cells, which absorb sunlight. Sunlight is composed of photons, or particles of solar energy. These photons contain varying amounts of. Solar PV panels are often described as “turning sunlight into electricity,” but for many homeowners and first-time solar users, that explanation feels too simple.
