This summary reviews publicly available information about the adverse impacts and potential benefits of ground-mounted large scale - PV solar power on wildlife in North America, and the status of our knowledge regarding how to mitigate adverse impacts and enhance beneficial. This summary reviews publicly available information about the adverse impacts and potential benefits of ground-mounted large scale - PV solar power on wildlife in North America, and the status of our knowledge regarding how to mitigate adverse impacts and enhance beneficial. Seventeen turtles had home ranges that overlapped with the solar arrays whereas 24 turtles had home ranges that never interacted with the solar arrays. We calculated home range sizes and tested for differences between overlapping and nonoverlapping groups. Solar-generated. Eastern Box Turtle (*Terrapene carolina*) populations have declined drastically since 1970 because of continued destruction and fragmentation of their habitat. Although they are known to shift their home ranges because of environmental degradation, it is unknown how solar arrays impact Eastern Box. Through a science-based assessment, Conservancy scientists identified enough suitable, already-disturbed land in the Mojave Desert to meet California's renewable energy goals seven times over, while avoiding impacts to wildlife and wilderness.
