Rooftop photovoltaic panels are harmful

Overview

Let's clear the air — the overwhelming consensus among scientists and engineers is that solar panels are generally safe. While myths around solar panel radiation risk circulate online, there is no evidence proving that rooftop solar systems cause harm to people living underneath. Little do people know that solar energy systems can be dangerous to their health, due to the EMF's emitted. Just one of scores of health impacts can be increased cancer risk. EMF stands for manmade "electromagnetic field (s)", such as produce unnatural electric, magnetic, or rf (microwave). The electromagnetic radiation from solar panels is minimal and similar to everyday devices like microwaves, posing no health risks. Roof strain, potential electrical difficulties, and incorrect installation can all cause problems if not handled promptly.
