

Slovakia energy transition

Overview

Slovakia submitted its final updated National Energy and climate plan (NECP) on April 14, 2023, which was more than nine months after the original deadline of July 14, 2022. The NECP provides an overview of key the country's objectives and contributions within the Energy Union and. The key objectives of the Slovak energy policy agenda are: increasing efficiency in the power and end-use sectors, reducing energy intensity, reducing dependence on energy imports, expanding the use of nuclear power, increasing the share of renewables in the heat and electricity sectors, and. Slovakia's land use, land-use change and forestry (LULUCF) sector is an important carbon sink, absorbing almost a fifth of the country's emissions. In April 2023, Slovakia proposed a revision to its recovery and resilience plan, adding a REPowerEU chapter. 2% share of renewable energies in gross final energy consumption by 2030. [1] To ensure the security and affordability of electricity and heat generation, the state is poised to support renewable energy sources. Slovakia has made a remarkable achievement in its electricity generation by sourcing over 85% of its power from low-carbon and clean energy sources.
