

# Small-scale charging and energy storage solutions

## Overview

---

The systems work by drawing energy from the grid (or a localized power source), storing the charge, and later releasing it to provide electricity or other grid services as needed. Typically, BESS charge when energy is cheap and demand is low, and then discharge the stored energy. Huijue Group's energy storage solutions (30 kWh to 30 MWh) cover cost management, backup power, and microgrids. To cope with the problem of no or difficult grid access for base stations, and in line with the policy trend of energy saving and emission reduction, Huijue Group has launched an. A commercial energy storage system allows facilities like businesses, industrial parks, charging stations and virtual power plants (VPP) to control how they use energy, set electricity prices and tackle blackouts in a flexible and smart way. It typically involves advanced battery technologies. It helps reduce operational costs while improving power reliability—giving users greater visibility and confidence in their energy usage. Our product offerings include hybrid inverters, battery inverters, battery solutions, solar charge.
