## Overview

---

On average, a well-designed 5.5kW solar system can generate around 20 to 25 kilowatt-hours (kWh) of electricity per day, depending on the sunlight available. How Much Energy Does a 5.5kW Solar System Produce? However, the exact energy production will depend on various factors such as geographical location, orientation of the solar panels, shading, and panel efficiency. In a perfect world, a 5000 watt solar system will produce 5000 watts an hour or 25000 watts / 25kw a day with 5 sun hours. Think about your car: kW = your car's speedometer.
