Overview

This case study delves into the innovative role of Battery Energy Storage Systems (BESS) in stabilising and supporting modern grids, with a particular focus on a large-scale BESS project undertaken by Tata Consulting Engineers (TCE). The Need for Grid-Connected BESS Integrating renewable energy. ble energy resources—wind, solar photovoltaic, and battery energy storage systems (BESS). These resources electrically connect to the grid through an inverter— power electronic devices that convert DC energy into AC energy—and are referred to as inverter-based resources (IBRs). Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. This amount represents an almost 30% increase from 2024 when 48. 6 GW of capacity was installed, the largest.
