

Solar inverter quality inspection report

Overview

This report is available at no cost from the National Renewable Energy Laboratory (NREL) at www.nrel.gov. Measurements for each string should be within a 0.1A range of each other, assuming consistent weather conditions, and all strings having same tilt and azimuth angle. Cover Photos by Dennis Schroeder: re-identified after arrival and cost-intensive N50438, AS4777, C10/C11, G38/1, G59/2, UTE-15712 and VDE0126-1-1. Basic solar inverter quality testing on-site at a factory includes a rating, the system operation and applicable instrumentation. Intertek CEA's comprehensive, supplier-independent analysis of inverter. Do we have a copy of the plans?

What is the PTO date?

If a string inverter system, how many optimizers are there?

Does PTO date match monitoring?

Are arrays mapped correctly?

How many error messages have there been over the last year?

Have there been significant periods that the system has been.
