

Solar inverter soldering iron

Overview

Soldering Iron or Station: Choose a temperature-controlled soldering iron with a fine tip (1mm or smaller) for precision work on small components. A power rating of 25-40 watts is ideal for most PCB tasks. **Solder Wire:** Use lead-free solder with a rosin core, typically with a diameter. When repairing solar inverters, choosing the right pressing iron for solar inverter is essential for achieving strong, durable solder joints on power modules like IGBTs and MOSFETs. The best models offer precise temperature control, even heat distribution, and compatibility with thermal pressing. YIHUA 939D+ Digital Soldering Station, 75W Equivalent with Precision Heat Control (392°F to 896°F) and Built-in Transformer. ESD Safe, Lead Free with °C/°F display (Black) Need help?
