

# Solar power generation on the rooftop platform of the community

## Overview

---

Rooftop community solar is a type of community solar project where solar panels are installed on the rooftops of buildings where participants purchase a share of the solar system and receive credits on their utility bill for the energy produced by that share. Rooftop community solar is an innovative approach to solar energy that leverages the collective power of groups to generate and share renewable energy. That means power doesn't have to travel far, which makes the system more efficient and reliable. This model expands access to renewable energy to renters, households that qualify for energy assistance, homeowners with. As homeowners across America embrace solar energy, a crucial decision emerges: choosing between community solar projects and rooftop installations. If you install solar at your home or business, you'll likely install a rooftop solar panel system.
