

Solar power generation system e1 fault

Overview

Error code E01 is frequently encountered and typically signifies an overvoltage condition within your solar inverter system. This error can occur when the voltage output from the solar panels exceeds the safe operational limits of the inverter, potentially causing damage if not. To address the issue of a solar panel continuously displaying an e1 error code, it's essential to follow a systematic approach: 1. Check the connections, ensuring they are secure and free from corrosion; 2. Inspect the inverter, as malfunctioning could trigger the code; 3. I'm getting an E1 error on controller - battery over discharged (LiFePO4). Will the system slowly power it up?

The inverter is not coming on, will that improve over the. My BMS can modulate the ATC lead, this is important because it allows me to let the battery back off after full charge, and also because the ATC limit is also the "reset SOC" limit - I MUST hit the ATC limit with at least one of my charge sources. So the BMS frequently turns off the BP (at least. Follow this path to fix it: Advanced Settings > External EPM Set > Fail Safe Set > Change ON to OFF and then press Enter. There is also an Internal EPM Set.
