## Overview

---

Solar energy does not directly cause drought but can influence water availability through land use changes and local climatic effects. 1, The installation of solar farms often leads to the alteration of land surface characteristics, which can affect local hydrology, 2. Heat, weather and pollution cause power generation shortages. Drought in your area?

Report. This Perspective article provides a very brief overview of the topic of wind and solar energy droughts, including a short discussion of hydropower droughts. Such shortages can leave millions without access to cooling or cooking abilities.
