

The ecological environment under solar panels

Overview

Solar energy technologies and power plants do not produce air pollution or greenhouse gases when operating. Using solar energy can have a positive, indirect effect on the environment when solar energy replaces or reduces the use of other energy sources that have larger effects on the environment. Ground-based, utility-scale solar panel installations used for electricity generation of 1 MW or greater are commonly referred to as 'solar farms' (US Energy Information Administration, 2020). The purpose of the solar farm is to generate and sell electricity, therefore it is key that the. The overall effect, however, remains significantly less detrimental than that of fossil fuels. This research presents a comprehensive review of the ecological. Among the top alternatives, solar panels have gained immense popularity.
