

The roof of photovoltaic panels in the community

Overview

Rooftop community solar is a type of community solar project where solar panels are installed on the rooftops of buildings where participants purchase a share of the solar system and receive credits on their utility bill for the energy produced by that share. In most cases, customers benefit from energy generated by solar. But purchasing panels for a single home can be a little pricey, we've researched the best solar panels for homes to help evaluate the options but this may not be very efficient if you have nearby neighbors who are also interested in solar That's where community solar comes in. If you install solar at your home or business, you'll likely install a rooftop solar panel system. While both options advance clean energy adoption, they serve distinctly different needs and situations. 00 per watt, which is a historic milestone.
