

The solar power generation on the roof of the villa is enough

Overview

The answer depends on various factors, including where you live, the size and orientation of your roof, and the efficiency of the solar panels. In a perfect world, the average roof in the U. can generate around 21,840 kilowatt-hours (kWh) of solar electricity annually—that's more than most homes need. But also, the world isn't perfect. Realistically, your roof's solar generation potential will be less than that. As renewable energy becomes increasingly popular, more homeowners are making the switch to solar power.
