

# The work of installing photovoltaic panels in the south

## Overview

---

Typically, solar panels perform best on south-facing roofs with a slope between 15 and 40 degrees, though other roofs may be suitable too. You should also consider the age of your roof and how long until it will need replacement. Solar panel installation costs range from \$15,000 to \$30,000 for an average American home, with a payback period of 6 to 10 years depending on your state's incentives and sun exposure. This comprehensive guide walks you through every step of your solar project, from initial assessment to system. Solar photovoltaic (PV) installers assemble, set up, and maintain rooftop or other systems that convert sunlight into energy. Installers also must. Timeline Reality: The complete solar installation process typically takes 60-120 days from consultation to activation, with permitting being the longest phase (30-45 days) rather than the actual installation (1-3 days).
