

# Turkey environmental sustainability

## Overview

---

In 2021, Türkiye ratified the Paris Agreement on climate change and announced 2053 as the target for achieving net-zero emissions. <sup>1</sup> In alignment with global trends, Türkiye's greenhouse gas (GHG) emissions in the past century have increased alongside rising average. The entire ecology is obviously being significantly impacted by climate change. Its causes must be found and addressed before it can be prevented. Therefore, this research investigates the impact of Green Production Processes (GRPP), Technological Globalization (TGLO), Renewable Energy Consumption. The Türkiye country profile provides a concise overview of key trends across three dimensions: environment and climate; socio-economic change; and system change (energy, mobility and food) in the country. In recent decades, flooding, heatwaves, droughts, wildfires, landslides and extreme windstorms have affected the country with increasing frequency and intensity. The year 2021 was particularly. Türkiye's journey to net zero could bring significant change to the country's economy, presenting challenges yet revealing new opportunities, such as reducing trade deficit and reliance on energy imports through the use of Türkiye's full renewables potential.
